A massage – why is it essential?

'Touch' is probably one of the most underrated of our senses in this day and age. As we grow older, we use our sight and hearing much more than touch. How often do we really touch our family, friends and work colleagues? People who aren't touched enough can suffer emotionally, and this in turn can lead to physical ailments.

Massage is an excellent way to put the 'touch' back into our lives! Massage, one of the oldest forms of treatment known, is an ancient art therapy in many countries. Generally, its purpose is to treat stress or pain and to heal and relax the body. Massage focuses on stimulating the nerves, muscles and glands of the body to perform better. Massage techniques require both knowledge and skills. A good massage can create happiness.

The word 'massage' dates back to the ancient Greek word meaning 'to knead dough' (*μάσσω*).

Benefits of massage

1. A **better blood circulation** is part of the chain reaction that occurs in the body as a result of receiving massage therapy on a regular basis. When you have a better blood circulatory system, it helps to deliver nutrients and oxygen to all cells in the body.
2. Massage **carries metabolic waste away** from muscles and internal organs, resulting in lower blood pressure and improved body functions.
3. Massage increases circulation, friction, and thus **heat** in the muscle fibres, helping the muscles and surrounding tissues to become more elastic. Soft tissues of the body are like gelatin, in the sense that they become more dense and congealed when cold, and more flexible when warm.
4. Massage also helps to stimulate the **lymphatic system**, which will encourage lymphatic fluids to be circulating through the body. Stimulating the lymph organs will thus increase the immunity system and help controlling various pathogens.
5. Massage helps to **balance body and mind**, while the hand of the massage therapist touches your skin. This way, kindness and attention will connect to your body.

Foot massage

Foot massage has been practiced in many cultures for centuries to promote health and well-being. Today, foot massage is considered a complementary and alternative medicine used by millions to relieve pain, reduce stress and anxiety, rehabilitate injuries and boost general health.

The practice of foot reflexology massage involves applying pressure to specific points on the feet in order to affect various parts of the body. Whether you make time for self-massage after a long day or head to a spa for a session with a certified reflexologist, it won't just be your feet that reap the benefits.

Essential in the foot massage is the solar plexus reflex. The solar plexus is sort of a little warehouse where all your stress is stored. When the solar plexus point is pressed on, stress is released, blood circulation can resume to its job to the fullest: of transporting oxygen and nutrition to the cells as well as cleansing waste and toxins away. Thus the body is renewed.

Benefits of a foot massage:

1. **Improved blood circulation;**
2. **Better removal of toxins;**
3. **Balance and harmony (homeostasis);**
4. **Energy and rejuvenation;**
5. **Enhancement of immunity.**

Face massage

The face is full of nerves and pressure points, so it makes sense that a face massage is a desirable form of pampering.

A face massage combines lymph massage, Swedish massage and pressure point techniques. The therapist uses gentle, even strokes to manipulate superficial layers of skin, muscle and connective tissue.

Whether you are looking for a quick midday pick-me-up or a soothing escape, the luxury of massage is easily justified by some of its more practical benefits.
